

C² GRIND AID+

Reduce scratches, extend the life of your diamonds and densify in one step

C² Grind Aid+ makes the wet-grinding process go faster, and saves time on additional steps all while densifying in a single step. The solution lifts concrete slurry solids away from the surface, suspends them, and clears the path for the diamonds. This process eliminates the need to wait for floors to be clean and dry before densifying and enables wet-grind applications to go up to 40% faster.

- Minimizes scratches created during lower-grit diamond tooling steps
- Makes post-grinding clean up easier
- Reduces labor and tooling costs
- Pairs perfectly with C² Power Polish, our innovative power trowel grinding system
- Extends the life of diamonds and shortens the project time line
