

C² TROWEL AID

Smoother, Stronger Concrete Finishing.

C² Trowel Aid is a colloidal silica finishing aid that improves workability and surface lubrication, making fresh concrete easier and faster to finish. It extends workable time in tough conditions—like heat, wind, or low humidity—while eliminating the need for added water that can compromise slab performance. Ideal for dry-shake hardeners and eco-friendly mixes, it helps achieve a smooth, consistent finish every time.

- Enhances surface lubrication for easier and faster finishing
- Reduces the need to add water to the surface, preserving the slab's performance
- Effective for finishing shake-on hardeners in environments with minimal bleedwater
- Minimizes evaporation-related issues, helping maintain surface integrity
- Designed to be diluted 4:1 with water to save on shipping
